We show you the facts as they are

Preface

We will show you the facts about digital currencies as they really are.

We have spent two years researching on digital currencies and our purpose is to remove the distance between the people and these currencies as well as to attract more interested people to investing and supporting the projects in this market. We try to eliminate the weak points of this emerging and profitable market and help all the people of the world to succeed. We will also succeed with you.

Long time ago, internet forums discussed about an internet currency in lots of groups and in most of the countries which were accompanied with a lot of rumors and speculations. These speculations included a number of questions namely: who is the inventor of this internet money? Should tax be paid for it? How can this currency be transferred and kept? How is it earned? Can the governments and other judicial authorities interfere with it? If this currency is the internet one, is it in danger of hacking like other information available on internet? Some of these speculations still exist in the present time. But it is obvious that their value and the popularity has increased and even the fluctuations of these possessions attract many of the stock market traders to this field. Considering the stunning progress of the above mentioned currencies, in addition to these traders, the increasing number of those who were interested in investment and are not afraid of taking risks work in this area. A small number of them start this business by achieving necessary information and knowledge or working in other financial markets, on the other hand, a large number of them just heard about their stunning profits and learned about them in social networks or from their friends and relatives desiring gaining a lot of money in a short period of time

who invested in these markets without any relevant knowledge.

Among them, there were some of the world's richest people making use of every opportunity to increase their wealth, regard this market as suitable opportunity to obtain their objectives.

Since these markets have been considered as emerging markets, its fund was not so much that has not fluctuated greatly by large handlings.

In the meantime, some of the wealthiest people made use of this opportunity and manipulated the market by great handlings. Since a lot of investors in this market were the common people lacking enough knowledge and wealth, as the result of sudden fluctuations, they were impressed by fear and greed and eventually lost their money which was invested in this market hoping to increase their asset.

Some more having social activities and lots of advocates sometimes make rumors and excite people's emotions tried to lead the price of the their intended currency toward what they had planned and earned macro profits this way.

It should be noted that this market is also a part of online financial markets and regarding economic news and statistics presented by the governments, they can be fluctuated greatly, so those who has the ability to analyze these information and statistics or had access to the first hand news profit from these fluctuations a lot. But these fluctuations resulted in financial loss for common people and this cycle still goes on.

These elements make more people interested in digital currencies, on the other hand a lot of those who had financial loss left the market.

The idea of this project formed on March 10th of 2020, a few days before the formation of this project, all the people were hopeful to Bit coin hiking. Suddenly, the value of Bit coin declined greatly to about 4000 dollars which means 58 percent of price reduction in less than a few days!!!

A lot of those who are interested in digital currencies have been disappointed. Some more fared while hearing about the risk and some of the others left the market for ever because of the great financial loss.

In the meanwhile, CCN project emerged observing the unpleasant situation of those who are present in this market. So that, using

its objectives, the project can help the people of the world and show them the right way by teaching them the digital currencies correctly. CCN intends to present you the news in appropriate time by using free flow of information and removing the obstacles of public information.

It also aims at provide you with the analysis of the experts of this market in the best possible way and with the least number of errors after investigating all the effective factors on the price of digital currencies. In these situations, the CCN followers won't miss any piece of news and will know about the main causes of market fluctuation.

In all projects, CCN is known only by this name and it will be registered as a commercial brand in the future. Whenever this name is used in a website or in an application, it is just a reference or link for our commercial name.

CCN is a popular project and only a management team leads it to serve people better.

CCN smart contract is open source and highly secured. It is only a functional token.

This white paper is not a smart contract and is not an invitation for investing in digital currencies. Everybody who invests in CCN, has enough knowledge in buying and selling digital currencies and knows that investment on this currency is highly risky and accepts that CCN has no responsibility for the lost money. CCN is on the china Smart Binance Platform.

Concept

1

CCN has been founded in March and its idea has been studied for two years so that it can finally be most effective for all of those who are interested in digital currencies and the future of this market.

2

CCN is not just a token. We follow a variety of goals to attract the people to these currencies by starting this project and presenting it. All of our objectives will be available in our website as well as in our application.

Objectives

1 Launching a 24/7 news network in English which is translatable to 00 languages to review the news and other effective factors on market every moment and every day and analyzing digital currency charts and studying new projects in blockchain industry with the experts of this industry so that the people around the world can make the right investment online.

These facilities can be available on the Metavars Platform in the near future.

2 Basic training digital currencies and blockchain industry and their applications free of charge for all people of the world online and in the future on the Metavrs Platform with a modern design and idea.

3 CCN special wallet and exchange with the lowest commission in a completely direct way.

6

- 4** Running the largest NFT Gallery for auction to buy and sell them in order to support this emerging industry so that all people can know about this attractive and profitable industry and make use of their capacities and even earn money.
- 5** Establishing an app store to provide apps and games and all the similar items created using blockchain platform so that the users can have access to all of these programs and services simultaneously as well as basic classifications of the created items and this way more know about the facilities of blockchain industry and support it.
- 6** Setting up a CCN token stake with profit of 30%, which is the profit of the users participating in our project. We consider our holders who participate in our stake as our partners.
- 7** Installing the token verification system assessing and scoring the value and the efficiency of tokens as well as future analysis of this token for all the investors and people in intended places so that they will no longer engage in incomplete or worthless projects or scams.
- 8** Installing a section in order to introduce and invest on the profitable projects for those who are interested in this field as well as to support these projects and developers using attractive and novel ideas and to introduce them to interested investors in this area so that the investors can earn more profits and the blockchain technology can be progressed by being supported by the active developers in this field.
- 9** Thinking about vulnerable people. Lack of water resources has now posed a big challenge to human beings and their lives. In Africa, there has been no rain for several seasons and all of their farm stocks died. Even the people's own lives has been endangered greatly. In the Middle East, there are civil wars over water and all of these problems are the result of ignoring the environment and a serious warning to human life. We cannot ignore our social responsibility to save the human race.

”

We decided to allocate a part of the project revenues to water rehabilitation and we must support the vulnerable people before it is too late. We must think about saving vulnerable people and improve the quality and the level of their life. Now a days, required water resources and fresh water is a big challenge for people and their lives. There has been little raining in Africa for several years and their farm stocks died. Lack of water is so serious that endangers their lives. In some other countries and areas of the Middle East, there are civil wars over water. All of these problems are the result of ignoring the environment and destroying the nature and this is a serious danger for all people. Accordingly, we decided to allocate a part of the project revenues to vulnerable people before it is too late.

Values

Clarity

The CCN team considers its main duty to be more clear in digital currencies and blockchain industry so that the number of interested activists in this industry is continuously increased by presenting true news and establishing justice in education and supporting the free flow of information and the activists of this market.

We believe that the principle of continuity in any industry is its clarity.

Advocators

We consider the fans of digital currencies as our family and our partners. In spite of the current atmosphere in this industry, there is no gap between us and our fans and we consider ourselves obliged to serve and be honest with them.

As stated in the objectives, our team examined all the weak points of this market and will not allow anyone to leave the market any more. Our fans and we will help the industry to grow continuously by creating a great alliance.

You and we make up a family and believe that without family support, no project will succeed. You are our first and last priority.

Trust

In financial markets, trust is the most important principle. Investors will trust more when they see clarity in project processes and it causes projects to perform their duties too. Trust originates from human feeling. Even incredible tasks can be performed with trust. Because it leads to unity and consequently nothing is impossible when there is unity.

We intend to have you by our sides forever, for this purpose we will be with you in all steps and consider you as our partners. We proved it in our staking project. We will pay the highest profit. In all the projects, we and our partners will have the same profit.

Long term vision

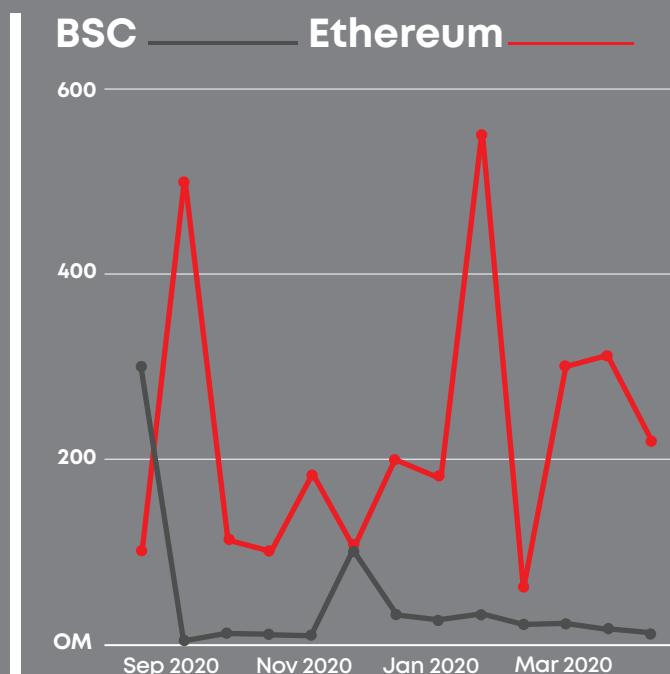

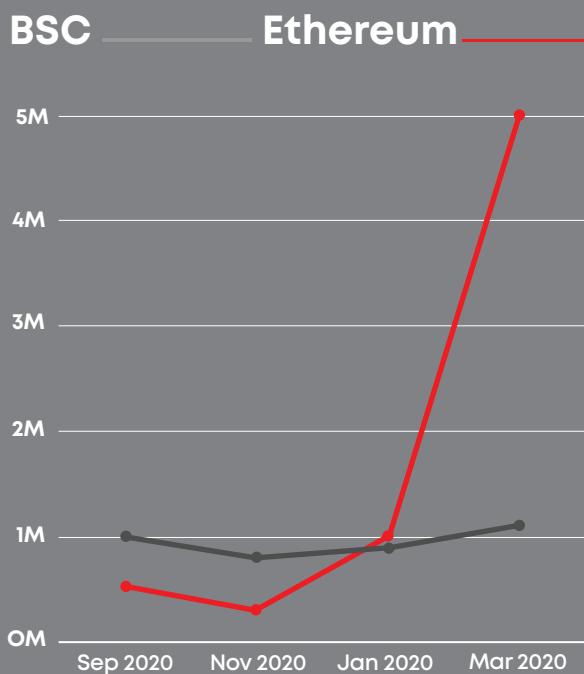

We consider updating the plan and keeping up with the changes as one of our most important functions in the project, that is why we will add several goals to the White Paper goals every year so that the users have always projects for investment and partnership.

The project management team has a long term vision to be with their partners since this team originates from the partners. Also blockchain and digital currencies industry is at the beginning of its way and we believe that digital currencies will evolve the world one day.

We will be more powerful together

The purpose of all our attempts is to create a unified and homogenous community in blockchain and digital currencies industry. Through this alliance, we can attract more people every day.

We will invest in successful projects so that we not only profit financially, but also we support this industry which will be profitable for us and our children in the future.

Blockchain network

TOKEN SYMBOL: crypto currency network (CCN)

TOTAL SUPPLY: 100 Quadrillion

CIRCULATING SUPPLY: 80 Quadrillion

COIN BURNT: 20 Quadrillion

Binance Smart Network

Binance Smart Chain (BSC) was developed as a means of utilizing solidity-based smart contracts with much greater speed and efficiency, compared to other competing networks. With decentralized exchanges made on BSC platform, exchanges will be done with extremely high speed and low fees. BSC has started to become one of the most frequently used blockchains for decentralized finance (Defi). BSC uses a token protocol developed by the Binance Team called BEP-20.

Bep-20/BSC in 5 seconds:

<https://trustwallet.com/blog/binance-smart-chain-in-numbers>

The advantages of Binance Smart Network are:

The advantages of Binance Smart Chain are:

It is a specific blockchain which provides all the users and developers with security and safety.

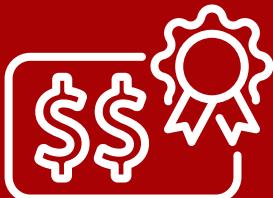

Its native dual chain interoperability will allow cross-chain communication and scaling of high performance Apps requiring a fast and smooth user experience. It is EVM-compatible and supports all of the existing Ethereum tools while transactions are done faster and cheaper. This network works based on POS (Proof of Staked) Algorithm in which transactions are verified by 21 built validators. It means providing decentralization and participating the significant number of the people of the society.

**| It should be noted that token is not responsible for
the actions done in Binance Smart Chain Network. |**

10

Holders' rewards:

You are our partner in all cases.

We have considered a lot of rewards for our long term holders and loyalists to this project since they buy and keep our token and hereby support us and CCN project financially. As mentioned several times before, our holders are our partners.

10%

In the case of manual token burning, we will share 10% of the total token burning as a reward among our long term holders. This price will be automatically added to your property.

30%

Our main reward is in staking our token to which the highest profit among digital currencies is allocated. Because we share the profit of running the project with you. 30% of your capital in the staking will be paid to you as the annual profit.

200.000 \$

For every 100 million dollars that are created in market Cup, 200000 dollars are paid to the 200 holders holding our currency for the longest time, according to the held price.

cryptocurrencynetwork.co

Advertisements

introducing project and attracting user

Almost 90% of the presented tokens and currencies were not initially calculated for the advertising costs in available spaces as well as specific fields of this industry to introduce token. The cost of attracting new users and holders as well as its administrative expenditures to run the project and achieve its goals were not included. We believe that if you have made the best digital currency but do not advertise it principally and do not lead interested people to your project by introducing the capabilities of the currencies and the current projects and if you do not attract new users besides the current ones, your project will not only remain incomplete and will not progress, but also the project will have problems in fulfilling its commitments.

Based on two years of research and studying all the available aspects, we have started our project and have investigated more than 1500 tokens and currencies with and without project. Finally according to an open source smart contract, we have decided to keep 2% of the transactions as advertising cost in VOLT in a decentralized manner so that the project advertising team can help us achieve our goals stated in road map.

One of the most important goals is to know interested people in the field of cryptocurrency with CCN project and consequently we can stop their capital loss.

Project progress

(research and development team):

Each project requires an expert team namely (R&D) team for studying and doing research for basic recognition of the market and the audiences' needs as well as the users of the project products and services.

The main requirements as well as the weak and strong points of this field can be recognized before establishing the project by this team. It

can also study all the aspects and the as well as cooperation with other present teams and analyze the objectives of that project and then in cooperation with each other help the project to achieve its goals.

The main task of this team in CCN project has been the investigation of the main problems of digital currency users and interested people in this field so that together with other present teams in the project they can achieve the project goals with your support.

Since the cryptocurrency and blockchain industry is an emerging and up to date one, we need this team to continue its activity after running the project beside other present teams in CCN project. This team can keep research and studying in this industry and can identify all the users' requirements and try to meet them continuously in CCN team.

Since one of the basic tasks of CCN team is to support the partners and holders, who are the investors of this project, is has considered a part so that the users can express their problems there directly and CCN team tries to find the best solution.

Regarding the stunning activity of R&D team and updating this industry, it has been decided to consider 2% of the transactions' cost for financing the expenditures of this team. This 2% will be withdrawn in a complete decentralized manner and in the form of an open source smart contract.

This structure makes the team completely update. Removing obstacles and problems causes the development of blockchain and digital currency community as well as making people interested in this industry so that its acceptance results in development and increasing the CCN project and also more profit for holders and other users utilizing this token and project.

CCN Token Protocol

We will guarantee the success of the project by following these three items:

- ① Rewarding the holders for their trust in us.
- ② Token advertising costs that guarantee the increasing progress of the project and support the users more and consequently more profitability for the holders as well as the users of this currency.
- ③ The costs of progress and completion of projects causing fulfillment of commitments and project goals achievement.

Each transaction costs 5 percent for the sender (seller) which is divided into two parts:

- ① 3% of advertising costs
- ② 2% of project development costs

Short term vision

We want to show you the short term prospective of the project!

Perhaps this question is in your mind that what is the future of digital currency and our own project? Given that our team has been studying and researching the opportunities and behavioral threats of digital currency users for a long time and has drawn the project development and advertising plan based on their behavior pattern, our estimate for the next six months will be as follows:

- ① The number of our holders in the first six months +100K
- ② The number of our Telegram members in the first six months +150K
- ③ The number of our Twitter members in the first six months +150K
- ④ The number of our Instagram followers in the first six months +100K
- ⑤ Market created on Token in the first six months +300
- ⑥ We will definitely among the top currencies and trends in reliable sites in the field of digital currencies.
- ⑦ Our exchange office will be used by many people in website and application.
- ⑧ Our news network will be ready to perform professionally and live twenty four hours a day and seven days a week with experts of crypto industry on online platforms such as YouTube, Instagram, and Facebook and it will be one of the most popular online media regarding its content. We are paving the ground for its implement on metavers.
- ⑨ Our application will be running using some functional taps and our R & D team are developing it into a super app.
- ⑩ Our application and website will be ready to provide all the people of the word with free and online training on digital currencies and crypto industry. We are preparing the Metavers space to train interested people.
- ⑪ Our staking website will attract lots of people to investment with the profit of 30%.
- ⑫ There will be hot discussions about the progress and the prosperity of our project in 50 big telegram channels.
- ⑬ We will be listed in large digital currency exchanges and we will be ready for the second phase of presenting our currency in Metavers business environment.
- ⑭ Celebrities in Instagram, Twitter, and Facebook will be our holders and will certainly say that by joining us, they will see great goals in the future.
- ⑮ Our Metavers commercial lands will be ready to be handed over where all kinds of galleries, concerts will be held and music albums and electronic books and what other commodities in Metavers will be sold and purchased.
- ⑯ Our blockchain App Store has been haunches and thousands of software, games, etc have been presented in it and the developers of this industry are increasingly progressing due to our team supporting.
- ⑰ Our NFT Gallery has been run with the lowest commission and easiest way. A lot of enthusiasts are investing on them and people trust in the profitability of this emerging market and we are getting ready to present the largest NFT Gallery in Metavers.
- ⑱ Our investment and support section has been launched and many investors are investing in future projects.
- ⑲ Our assessment and research team has started working and has become a reliable reference for investing in projects by investigating the currencies and their projects, scoring and rating them.
- ⑳ We promise that you will be among the most successful investors in this market in the first six months after investing in CCN project and digital currency. This is the result of a twoyear study and research.

14

Road Map:

Start:

- Starting the open source and decentralized programming of token considering required capabilities based on road map and the objectives.
- Starting the extensive advertising of token and project in Telegram and reputable websites.
- 5000 Telegram channel members.
- 5000 Twitter page followers.
- 5000 Instagram page followers.
- Unveiling token website.
- Starting the application programming.
- Starting news services programming in website.
- Starting the CCN stake programming in website.
- Starting working of exchanges in website.

Phase one goals:

- Starting the influencers' campaign.
- Starting three advertising campaigns in big Telegram channels.
- 50000 Telegram members.
- 50000 Twitter members.
- 40000 Instagram followers.
- 20000 holders.
- Being listed in two wallets.
- Being listed in two exchanges.
- Starting the programming NFT Gallery on the website and application.
- Starting the use of Dex and specific wallet in application.

Moving toward the goals:

- The beginning of the second stage of token and project advertisements in Telegram, Instagram, and Twitter.
- 25000 Telegram channel members.
- 25000 Twitter page followers.
- 15000 Instagram page followers.
- 10000 holders.
- Being listed in two wallets.
- Being listed in two exchanges.
- Finishing the designing stages and creating the application news page.
- Completing the designing and creating website news page.
- Starting a specific wallet programming.
- Starting a Dex programming in the application.

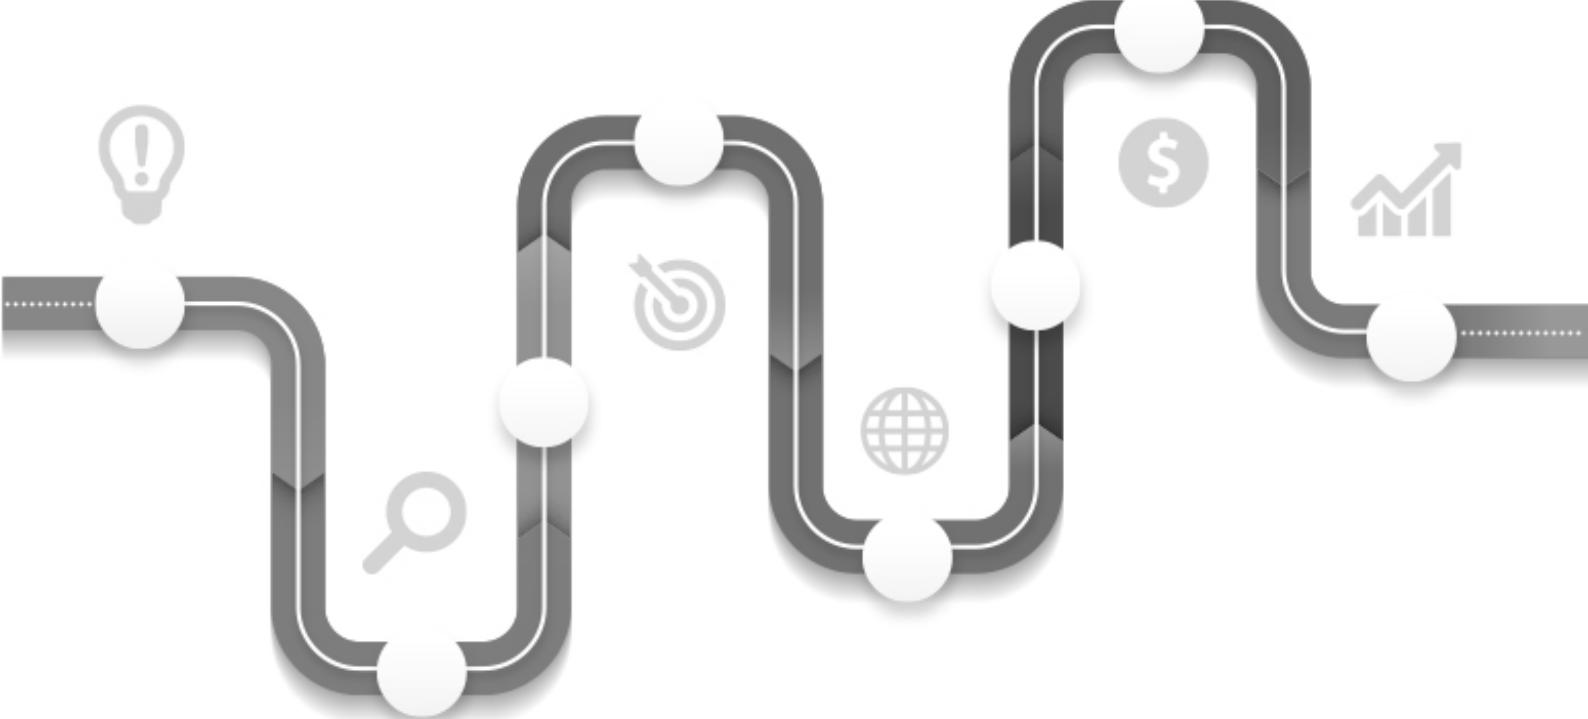

Phase 2 goals:

- Starting a high pressure tweet and trend campaign on Twitter.
- Starting a targeted advertising campaign in Telegram.
- 100000 Telegram members.
- 100000 Twitter followers.
- 100000 Instagram followers.
- 630000 holders.
- Being listed in two exchanges.
- Starting the programming of investment projects in available emerging projects IOCs in applications and websites.
- Starting using and auction in NFT Gallery available on the websites and applications.
- Starting publishing important and immediate news of digital currencies in the news section of the website and application.

Phase one achieving the goals: **Ultimate goal:**

- The second phase of the advertising campaign of Twitter and Trend followers.
 - Starting the influencers' campaign on Instagram.
 - 150000 Telegram members.
 - 150000 Twitter followers.
 - 150000 Instagram followers.
 - 50000 holders.
 - Being listed in spot section of exchange.
 - Starting the use of the investment section in valid ECO sections of the website and application.
 - Starting the programming phase 2 NFT Gallery including NFT games in website and application.
 - Starting the trial activity of CCN online television channel.
 - Live broadcasting of important and breaking news in online platforms as well as Instagram, you Tube and Facebook platforms 24 hours a day and seven days a week.
 - Starting online training digital currencies and blockchain industry on Instagram, you Tube and Facebook platforms.
- 250000 Telegram members.
 - 250000 Twitter followers.
 - 250000 Instagram followers
 - 100000 holders
 - Formal getting started of CCN television news channel.
 - Formal getting started of free CCN training course.
 - Ending the second version of application project.
 - Starting the use of specific Blockchain.
 - Getting started of completed with different pages.
 - Getting started of Blockchain App Store with thousands of game apps, etc.

We will succeed because you are with us.

The items we will follow to progress constantly

During two years of research, we concluded about the causes of holders' loss and the reasons why most of emerging currencies do not develop in spite of having excellent projects. We also found out why in most cases, these currencies move against the technical analysis and only whales and profiteers make profit by ignoring other members' rights.

We sought a solution to these problems and committed ourselves to removing them so that everyone can make profit out of digital currencies.

One way to solve these problems is to increase the working capital in this market which can be ascertained by increasing the number of users and interested people in this field. If the users access to a reliable source providing them with a financial statistics analysis and news as well as analysis of market as soon as possible, they won't loss as before and it makes the community much more interested and unified. We are here to make a profit together with you.

1 One of the most important reasons of sudden and unreasonable fluctuations and holders' loss is the fluctuations caused by the whales of that currency. Some large whales start buying a currency. At first maybe it causes an early progress, but then these whales determine the direction of market and do not allow technical analysis and natural progress of the project determine the process. They only think about their own benefits and ignore other holders' rights who are interested in this field to support it and make profit. We decided to design a robot to prevent whales' purchases to make profit. This robot will not allow anyone to buy more than 1 percent of the total token.

2 Trading robots are another problem of emerging currencies. Because by successive transactions, they create book fakes and mistakenly affect the market direction. This also causes sudden reversal trends causing only small holders' loss. In our system, we have designed a robot to prevent these robots from trading and prevents the holders' capital from leaving the pool one after another.

3 Following our research on hundreds of emerging currencies, it has been observed that immediately after the efforts of the project development team and long term holders, traders and short term holders make decision and sell altogether according to the profit and ignoring market direction. This makes a challenge for the project and its process after a downturn and cause a lot of people's loss. It should be noted that the project and long term holders' efforts result in the increase in the value of that currency. Accordingly, we have decided to impose limitation on sales in the first three months after launching so that the project does not experience a severe downturn and the development team can fulfill all of its commitments and the project is continuously progressing. The limitation is that the holders are not allowed to sell more than 100 dollars per day in the first three months of the currency launch. So, we decided to avoid sudden fluctuations of impulse selling as well as drastic downturn on currency value so that we can all benefit from it together.

4 We will burn tokens mostly manually and are committed to burn the tokens at the right time in order to preserve the value of our holders' currencies. We intent to burn 20 percent of total tokens and at the same time present all the inventory and thus in our own currency cycle, help ourselves to increasingly develop and increase our value by making right decisions.

5 We know that you trust in God throughout your life and consider serving the weak people as one of your social responsibilities. So, we have decided to allocate 10 percent of the total available tokens to supply water as well as to develop water resources in order to preserve human race. We should have a mutual understanding and consider the problems of human society as our own problems.

6 We want you, the holders, to be our partners in all our way to success and we will make all our efforts to succeed and profit together. You as our holders have also the duty to guide and help us in this way by advertising about us in your groups as well as expressing our progress in websites and introducing us in social networks.

Token distribution method

Primarily, we plan to introduce a token by holding an EC and a big campaign in the form of Airdrop

on prominent sites in this field and at the same time, to start our advertising campaign in social networks.

We intent to sell and allocate 2 percent of the total tokens of Airdrop to advertisement and 2 percent of the total tokens of EC to marketing and high pressure advertisement campaigns.

Two months after airdrop, we are going to launch our ICO token and bring it to public sale in exchanges.

Our strategy in presenting tokens to exchanges is that during each presentation, 5 percent of the total volume of token will be presented which will continue for several parts. Accordingly we can control the price by controlling the volume of input to the market based on the principle of supply and demand and prevent oversupply and price drop.

Cooperation in e – commerce

One of our largest programs in the field of project development and progress is based on the idea that we will first use our token in our app and website for in-app purchases in areas such as buying and selling NFT of payments for purchasing app and Blockchain markets or Metavars commercial lands. In this way we will become a payment currency within the crypto network making this token more popular so that other payment network will definitely make use of it due to the high volume of our transactions.

Entrance in payment market by our currency will be the culmination of this project to affect the entire market.

By running this project, you will definitely notice that in time and fast news as well as correct financial statistics analysis will have a significant role in your profitability and most importantly in preserving your capital.

We are looking forward a day when each digital currency user and each active trader in this market has an image of CCN in addition to the image of price and chart.

Because you will come to this conclusion that we will show you the realities as they are.

CCN is the first project in digital currencies which shares the profits of digital currency project with its own holders.

Let's support this public project whose main purpose is making all people interested in Blockchain industry and getting them familiar with the principle methods of earning money in this market. We want to avoid our and others' capital loss once forever. We also intent not to nip the desires which can change the world in the bud by a fictitious fluctuation.

THANK YOU
